

Amendments to the Specification:

On page 1, please amend the paragraph starting at line 12 as follows:

-- Arrangements for pressure-tightly attaching a resilient member to a connecting part are disclosed in United States Patent 4,471,520 and European Patents 0,110,805 and Patent 0,548,627. A component, which comprises radially displaceable segments arranged to have a ring shape, is placed about the receiving longitudinal axis of the clamping device. --
